1. Symbol Guide

The data screens show data for a wide variety of traded issues. This section describes formats for entering different types of symbols such as stocks, options, commodities, and commodity options. For a complete listing of index, market statistic, and indicator symbols, see the "Market Statistic and Indicator Symbols" section beginning on page 15. For a list of commodity and commodity option symbols, see "Commodity Symbols" beginning on page 45. For a company's ticker symbol, use the NameLook program or call the exchange where the issue trades.

In the formats that follow, a + (plus sign) is used only as a unit separator, and is not an actual part of the symbol format. The + character is used to make reading the formats easier. Do not type + when it appears.

1.1. Formats for Entering Symbols

In the formats that follow, a + (plus sign) is used only as a unit separator, and is not an actual part of the symbol format. The + character is used to make reading the formats easier. In general, the formats are SYMBOL + . + COUNTRY CODE + & + EXCHANGE CODE. SYMBOL will include the ticker symbol and other indicators such as its class. COUNTRY CODE is assumed to be US if a country code is not included. If a country code is included, it needs to be preceded by a period (.). Country codes are the standard ISO country codes. If no EXCHANGE CODE is included, then the composite data will be shown. If an EXCHANGE CODE is included, then it must be preceded by an ampersand (&).

See the following sections for more information:

- "Country Codes", page 12
- "Option Expiration Month Codes", page 12

Notes:

There are instances in the symbols above where the case of the letter used is crucial. For preferred or rights issues, for example, a lower case p or a lower case r is necessary.

For foreign exchange options, use the commodity option format when the underlying instrument is a futures contract and use the equity option format when the underlying instrument is cash.

To see which symbols are traded on Globex, see the list of commodity symbols beginning on page 45.

The year code used in commodity and commodity option formats above is the final digit of the year being used. For 2002, the year code would be 2.

1.1.1. Fund Notes

With the addition of unit investment trusts (UIT), NASDAQ is changing slightly the ticker symbols for the various kinds of funds for which it has data. The following is a summary of how to interpret fund ticker symbols.

Open-end mutual fund ticker symbols are five characters in length. The final character is always an X. The first four characters are variable.

Closed-end mutual fund ticker symbols are five characters in length. The first and last characters are an X. The middle characters are variable, but usually these characters are close to an exchange traded symbol.

Money market ticker symbols are five letters long. The first three characters can be any character. The two final characters are XX.

Unit investment trust (UIT) ticker symbols will be either five or six characters long. New UIT ticker symbols will be six characters long and will end with an X. Current UITs can keep their current five character symbol or change to a six character symbol. Current UIT symbols begin with a Z and end with an X. For more information on unit investment trusts, see the National Unit Trust Association (NUTA) website at WWW.NUTA.ORG or the Investment Company Institute (ICI) website at WWW.ICI.ORG.

December	Z

1.2. Market Statistic and Indicator Symbols

The market statistic and indicator symbols in this section can be entered as is. There is no special format such as the format for commodities. The symbols are sorted alphabetically.

1.2.1. Market Statistics for the U.S. and Canada

Common market statistics are available for each U.S. and Canadian exchange. These statistics are retrieved with the symbols listed in this section.

In the formats that follow, a + (plus sign) is used only as a unit separator, and is not an actual part of the symbol format. The + character is used to make reading the formats easier.

The exchange codes are listed in the next section.

Country Code in the Other Exchanges column is needed currently only for the Canadian exchanges. If no country code is included, the symbol is assumed to be for a U.S. exchange. \$ADVVE is for the advancing issues from the NASDAQ OTC "Other", and \$ADVVE.CA is for the advancing issues from the Canadian Venture Exchange.

Statistic	NYSE	Other Exchanges	Example
Advances	\$ADVN	\$ADV + Exchange Code + Country Code	\$ADVA
Declines	\$DECN	\$DEC + Exchange Code + Country Code	\$DECA
Down Volume	\$DVOL	\$DVO + Exchange Code + Country Code	\$DVOA
Issues Traded	\$ISSU	\$ISS + Exchange Code + Country Code	\$ISSA
Tick	\$TICK	\$TIC + Exchange Code + Country Code	\$TICA
Trin	\$TRIN	\$TRI + Exchange Code + Country Code	\$TRIA
Up Volume	\$UVOL	\$UVO + Exchange Code + Country Code	\$UVOA
Volume	\$VOLU	\$VOL + Exchange Code + Country Code	\$VOLA
Unchanged	\$UNCN	\$UNC + Exchange Code + Country Code	\$UNCA

\$VOLZ is an additional market statistic for the volume on the New York Stock Exchange for NASDAQ Intermarket (Listed) securities.

1.2.2. Market Statistic Symbol Exchange Codes: U.S. and Canada

The following exchange codes are used with the market statistics symbols.

Exchange Code	Exchange Name
A	American Stock Exchange
AO	American Stock Exchange Options
B	Boston Stock Exchange

Symbol	Exchange
\$AVOB	Boston Stock Exchange
\$AVOC	Cincinnati Stock Exchange
\$AVOM	Chicago (Midwest) Stock Exchange
\$AVON	New York Stock Exchange
\$AVOP	Pacific Stock Exchange
\$AVOX	Philadelphia Stock Exchange
\$AVOW	Chicago Board Options Exchange
\$AVOZ	NASDAQ

1.3. Dow Jones Indexes

These indexes are calculated by Dow Jones and are sent out via the Chicago Board of Trade (CBOT). Dow Jones also has a web site which will list indexes as they are added to the datafeed. Their site is <http://indexes.dowjones.com/symbols.html>. HyperFeed adds a dollar sign (\$) at the beginning of each symbol. Otherwise, the HyperFeed symbols should match the Dow Jones symbols.

1.3.1. Dow Jones Main Indexes, Actual

Index	Symbol
Dow Jones Industrial Average	\$DJI
Dow Jones Composite Average	\$DJC
Dow Jones Transportation Average	\$DJT
Dow Jones Utilities Average	\$DJU

1.3.2. Dow Jones Main Indexes, Theoretical

Index	Symbol
Dow Jones Industrial Average	\$DJIT
Dow Jones Composite Average	\$DJCT
Dow Jones Transportation Average	\$DJTT
Dow Jones Utilities Average	\$DJUT

1.3.3. Theoretical vs. Actual

The difference between the theoretical Dow Jones indexes and the actual indexes has to do with how they are calculated. The last sale price (most recent trade price) for the theoretical and actual indexes is the same. The open prices are different. The actual index will open with the first trade of any of the members that make up the index. The theoretical index will not show an open price until all the members of the index have begun trading. The high price for the actual index is the highest last sale price that the index achieved during the trading day. If a user kept a file with every index last sale price sent out by HyperFeed Technologies, then somewhere in that file would be the high price for the index for the day. This is the actual high price. The high price for the theoretical index is a calculation of the high prices of each of the members of the index. The reason this is called

theoretical is that the high prices of the members never coincide. The high price for member A might occur at 10:00am while the high price for member B might occur at 1:00pm. The theoretical high would represent the high price of each member even though they happen at different times. If a user kept a file with every index last sale price sent out by HyperFeed Technologies, then that file would never show the high price for the index for the day. What has been said about high prices can also be said about low prices.

1.3.4. Dow Jones Main Indexes, Indicative

These indicative indexes use Xetra prices (Deutsche Borse). The dissemination times are Eastern U.S. time.

Index Description	Symbol	Disseminated	Interval
Dow Jones Industrial Average – U.S. Dollars	\$DJII	3:00 a.m. – 9:30 a.m.	15 seconds
Dow Jones Industrial Average – Euros	\$DJIE	3:00 a.m. – 5:15 a.m.	15 seconds

1.3.5. Dow5 and Dow10 Indexes

These values are updated at the end of the day only (about 5:15 p.m. Eastern time).

Index	Symbol
Dow5 Price Return	\$DOW5
Dow5T Total Return	\$DOW5T
Dow10 Price Return	\$DOW10
Dow10T Total Return	\$DOW10T

1.3.6. Dow Jones - AIG Commodity Index Fair Value Indicators

Dow Jones calculates and disseminates fair value indicators for the corresponding Dow Jones – AIG Commodity Index futures contracts traded on the Chicago Board of Trade (CBOT). The Dow Jones – AIG Commodity Index futures prices and the corresponding fair value indicators are sent out Monday through Friday from 9:15 a.m. to 3:15 p.m. Eastern time. These prices are sent out once every 15 seconds.

There will be three Dow Jones – AIG Commodity Index futures contracts trading at any given time and each will have a corresponding fair value indicator. The fair value indicators only include data in the "Last Price" field. Because each fair value indicator is linked to a specific futures contract, it will no longer be calculated when the corresponding futures contract expires. To accommodate the

necessary additions/deletions to the datafeed the last two characters of the ticker symbol for the fair value indicators will contain variables.

The format for the ticker symbols of the fair value indicators is

\$AIFVMY

where \$AIFV is the root symbol, M is the month code, and Y is the final digit in the year. For example, \$AIFVF2 is the symbol for the fair value indicator for January 2002. See the "Commodity Expiration Month Codes" section on page 14 for the list of month codes.

Additional information can be obtained from www.djindexes.com.

1.7. Foreign Exchange

The symbol format for foreign exchange rates are listed in the "Formats for Entering Symbols" section. See page 7 for more information. Essentially, the foreign exchange symbols all start with a tilde (~) and then are followed by two standard ISO currency codes. The symbol for the foreign exchange rate from a specific contributor starts with a tilde (~) followed by two standard ISO currency codes and then an ampersand (&) and a contributor code. The contributor codes and some common currency codes are listed in tables below. Some examples are ~USDAUD would be the U.S. dollar vs. the Australian dollar and ~USDAUD&A would be the U.S. dollar vs. the Australian dollar as quoted by the Allied Irish Bank, Dublin.

Foreign Exchange Contributor Codes

2. Dow Jones Search Codes, A List

Dow Jones attaches index codes to each news story to make searching for specific news stories easier. Use the codes listed below to retrieve the appropriate stories.

Dow Jones periodically sends out as news stories a list of codes that they use. These codes stay fairly constant, but new news topics mean codes are being added. To get the most recent list of codes, enter CODES in the Key field. The Type field (the key type) should have Company Symbol selected.

The table below shows examples of the various keys and their types.

If the search code is:	then the key is:	and the type is:	Comments
F	F	Company Symbol	This is the ticker symbol for Ford Motor Company.
MSFT	MSFT	Company Symbol	This is the ticker symbol for Microsoft.
DELL	DELL	Company Symbol	This is the ticker symbol for Dell Computers.
